

Bulb Grease Application for Xenon Systems

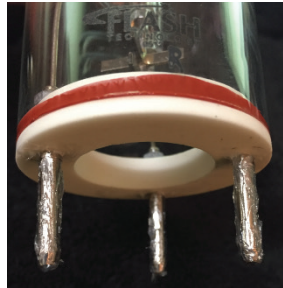

Bulb Grease

NOTE! Ensure the system is turned off and that power has been properly discharged.

- 1) Generously coat all (3) flashtube posts with the provided bulb grease.

Use the applicator pouch to evenly spread the grease.

- 2) Install the tube into the flashtube inserts. Ensure the tube is fully seated and that no air gaps exist between the tube base and the inserts. Remove any excess grease with a paper towel.

Take care not to touch the lens of the tube.
