

## FTB 207 White Catenary with Split Enclosure

The FTB 207 is an L-857 that provides a white strobe for day and night. It is designed for structures over 500' AGL that support overhead cables and wires suspended over canyons, valleys or waterways. The system is comprised of three lighting levels. The flash sequence is middle-top-bottom, with the interval between the top and bottom flashes equal to twice the interval between the middle and top flashes.

The FTC 121 system controller adds hardware which allows for EagleSmart monitoring and diagnostics.

Manufactured to meet specifications for FAA Type L-856, FAA-AC 150/5345-43F.

### Standard Features

- Up to 30' separation between PC and FH locates 90% of electronics in an ozone free environment resulting in extended component life
- Single enclosure for power converter and flashhead for weight and wind load considerations
- Available in multiple input voltages
- Complete system includes EagleSmart controller, handheld programmer and software
- NEMA 4X stainless steel outdoor rated enclosure
- Optional GPS synchronization
- Component-level technical support M-F 7am-7pm Central time
- Remote diagnostics with POTs connection to FTC 121
- 2-year warranty on all parts including tubes
- Listed on the Buy American Act registry
