

# Solar LED Railyard Safety Lights

Forget about battery replacements and running wires. Solar LED lights offer portability and long-term performance in industrial locations across the world.

The OL2A is a tough safety light ideal for railway blue flag protection, barricade and fence lighting. Fully integrated and protected from the elements, all components are contained within a durable compact unit. Shockproof, waterproof and built to last, the OL2A will be the most reliable piece of your safety arsenal for years to come.

Available in blue, red, yellow, green or white color output.

“I have seen and used a lot of blue lights, and Flash’s are top of the line. Their lights work flawlessly through heat, rain and freezing cold weather. They also take a beating—being lifted, lowered and sometimes dropped. But they never quit working. They are my first choice in blue lights; one less item to worry about.”  
— Brian Sinram, Union Pacific

Increase visibility where it matters most.

Up to 1,000 hours of battery power. 5+ year battery life.

No running wires. Easily transfers to new sites.

Fast shipping and quick installation. No electrical work needed.

Lower cost than conventional lighting. No cables or costly maintenance.

Requires little to no maintenance.

Built to endure years of heat, cold, harsh weather, shock and vibration.
