

Solar LED Crane Lighting

Forget about battery replacements and running wires. Flash Technology's solar hazard markers offer reliable, portable obstruction light solutions for use on tower and crawler cranes. Lights are manufactured in ISO 9001:2015 facilities with quality components and backed by an industry-leading warranty.

“No external wiring is a game-changer, saving about 2 hours on installation. It’s also safer because the lights can be installed on the ground prior to crane assembly. These lights have solved all my issues. This is the last obstruction light you’ll ever need—for an affordable price, at that.”

– Joe Mirabile, Lead Tower Crane Technician, United Crane and Rigging

Fast shipping and quick installation. No electrical work needed.

Lower cost than conventional lighting. No cables or costly maintenance.

OL4 Red

Up to 1,000 hours of battery power. 5+ year battery life.

No running wires. Easily transfers to new sites.

OL800

FAA-compliant L-810
Available in 3 solar engine sizes

Requires little to no maintenance.

Guaranteed to perform in extreme weather.
