

## About Flash Technology

Flash Technology designs and manufactures global aids-to-navigation. Founded in 1970, our airfield ground lights and aviation obstruction lights meet or exceed international lighting standards and support a wide range of business industries including aviation, broadcast, telecommunications, utilities and wind energy. Our industrial-grade solar solutions are field-proven to perform in conditions from desert heat to arctic cold.

Since 2003, Flash Technology has been a member of the SPX Corporation (NYSE: SPXC) family.

Solar Navigational Aids for

# Mine Sites and Camps

Industrial-grade solar solutions

- Hazard markers & safety signals
- Helipad & airfield lights
- Marine & dock lighting

The Power of Solar

## Portable. Durable. Reliable. Cost-Effective.

The location of mining sites can make grid-based power and lighting solutions difficult to implement and fuel-powered generators expensive to operate and maintain.

By minimizing wiring, cabling and trenching Flash Technology solar signals and navigation aids move easily with the changing face of your work site to reduce installation and maintenance costs by up to 50%.

When coupled with our industry leading on- and off-grid power solutions and a broad selection of solar powered area lighting products, Flash Technology provides one of the most comprehensive alternative energy packages currently available for industrial work sites.

### Warning Beacons & Hazard Markers

Easily deploy safety lighting along haul routes, in construction zones, on fences, barricades and more. Automatic dusk-to-dawn activation.

### Obstruction Lighting

Mark towers, cranes and other hazards to air navigation with FAA and ICAO compliant solar-powered obstruction lights.

### Airfield & Helipad Lighting

Illuminate helipads and rural airstrips with a complete range of airfield ground lighting products. Ideal for emergency back-up or for unserviced sites.

### Marine Lanterns & Dock Lighting

Mark hazards to marine navigation, entrances to ports and harbours and illuminate dock areas.
